Question

The number of radians in a 720-degree angle can be written as $a\pi$, where a is a constant. What is the value of a ?

Rationale

The correct answer is 4. There are π radians in a 180° angle. An angle measure of 720° is 4 times greater than an angle measure of 180° . Therefore, the number of radians in a 720° angle is 4π .
